

NovaPay Solutions Ltd

Open-source intelligence investigation — internal compliance use

Reference	OSINT-2024-0042	Date	14 June 2024
Analyst	J.M. Cánovas Soler	Classification	Confidential

Verdict: Not recommended — high risk

Multiple inconsistencies detected. Business relationship not advised without in-person EDD.

1. CORPORATE RECORDS — COMPANIES HOUSE (UK)

Registered name	NovaPay Solutions Ltd
Company number	14882031
Incorporation date	03 February 2023
Registered address	71–75 Shelton Street, London WC2H 9JQ
Director on record	Dmitri Sokolov (RU passport)
Paid-up share capital	£100 (legal minimum)
Annual accounts filed	No — overdue, dissolution warning issued
Declared activity	Financial services and payment technology

Nominal share capital

No annual accounts filed

Shared address — virtual office

2. DIGITAL INFRASTRUCTURE INVESTIGATION

■ WHOIS — who.is

who.is/whois/novapaysolutions.com

whois novapaysolutions.com

Domain registered 28 January 2023 — six days before company incorporation at Companies House. Registrar: Namecheap Inc. WHOIS privacy enabled (registrant details hidden via proxy). DNS: Cloudflare. No EV (Extended Validation) certificate. Domain active for less than 18 months.

WHOIS privacy active

Recent domain (<2 years)

HTTPS active

■ Wayback Machine — web history

web.archive.org

site:novapaysolutions.com — earliest snapshots

First archived snapshot: March 2023. Site initially displayed a generic landing page with placeholder text (Lorem Ipsum visible in April 2023 captures). Current content describing 'European payment services' only appeared in October 2023 — eight months after incorporation. No verifiable client history or case studies found.

Lorem Ipsum in early snapshots

8 months of no real content

■ Shodan — infrastructure exposure

shodan.io

hostname:novapaysolutions.com

Primary server hosted in Istanbul, Turkey (AS provider: Hetzner Online GmbH). Port 8080 open and publicly accessible — administration panel with no authentication detected. Server banner exposes version: Apache 2.4.41 (outdated — known CVEs). No WAF detected. Infrastructure is inconsistent with a regulated financial services entity.

Port 8080 exposed

Outdated Apache version

Server in Turkey — inconsistent with UK address

■ Google Dorks — advanced search

site:novapaysolutions.com filetype:pdf | "NovaPay Solutions"
-site:novapaysolutions.com

No public corporate documents found (policies, licences, regulatory terms). Company does not appear in any financial media or supervisory register (FCA, EBA). A search for 'Dmitri Sokolov NovaPay' returns a LinkedIn profile created in January 2023 with 12 connections and no verifiable prior employment history.

Not listed in FCA register

Director — no verifiable history

No public corporate documentation

3. CONSOLIDATED RED FLAGS

1 Virtual office registered address.

71–75 Shelton Street is a mass-domiciliation centre in London used by thousands of companies. It does not indicate real physical presence.

2 Nominal share capital of £100.

For a payment services company, a symbolic capital is inconsistent with the declared activity and may indicate the absence of genuine economic operations.

3 Failure to meet filing obligations.

Annual accounts are overdue. Companies House has issued an administrative dissolution warning.

4 Underdeveloped digital identity.

Recent domain, Lorem Ipsum placeholder text in historical snapshots, and a director LinkedIn profile less than 15 months old with minimal connections.

5 Insecure and inconsistent infrastructure.

Server located in Turkey with an exposed administration port and a known-vulnerable Apache version. Incompatible with a regulated FinTech handling financial data.

6 No presence in regulatory registers.

NovaPay Solutions Ltd does not appear in the FCA register or any other European supervisor, despite declaring payment services as its core activity — a potential regulatory breach.

4. CONCLUSION AND RECOMMENDATIONS

The open-source investigation into NovaPay Solutions Ltd reveals a set of material inconsistencies between the entity's declared profile and the data verifiable through OSINT. The combination of recent incorporation, absence of regulatory oversight, insecure digital infrastructure, and a director with no verifiable track record constitutes a high-risk profile.

No direct evidence of criminal activity has been identified; however, the absence of basic legitimacy markers — physical presence, operational history, regulatory registration — makes it inadvisable to establish a business relationship without enhanced due diligence.

✗ Do not proceed

with the business relationship under current conditions.

■ Request in-person EDD

including physical premises documentation, regulatory licence, and audited financial statements.

■ Verify with the FCA

whether the entity is operating payment services without authorisation — potential regulatory offence.

■ Review in 90 days

if the entity provides additional supporting documentation.

are real and publicly accessible. This report simulates the real-world workflow of an OSINT analyst conducting a due diligence investigation.
